SIX-MONTHLY INDEXES TO SCIENCE ABSTRACTS

Cumulative indexes to Science Abstracts are published twice a year covering the period January-June and July-December. They comprise author and subject indexes and some specialised or 'small' indexes. For Physics Abstracts and Electrical & Electronics Abstracts the Author Index and Subject Index are published as separate volumes. In this case the Small Indexes are included in the Author Index volume.

Author index

This lists in alphabetical order all authors of papers abstracted in the abstracts journal during the six months covered by the index, together with the title of the paper. Where there are co-authors of a paper the title of the paper is given only under the name of the first author. The serial number of the paper in the abstracts journal is in the form 3–12345, ie 1973—abstract no. 12345.

'Small' indexes

These are specialised indexes which allow the user to find quickly particular types of information which might be difficult to find using the subject or author indexes.

Bibliography index

In this index reference is made to articles which contain a significant list of references or biliography on the subjects listed.

Book index

This gives details of books received and abstracted by the abstracts journal.

Patent and Report indexes

These give details of those reports or patents which have been abstracted in the abstracts journal during the past six months.

Conference index

This index lists conferences for which published proceedings have been received and abstracted. Reference is given to the individual papers and their serial numbers in the abstracts journal.

Subject index

The Subject index provides an alphabetical subject key to the articles included in the abstracts journal. Some general guidance on its use is given below:

1. Look in the index for the name of the specific subject in which you are interested. In most cases this name will be a heading in the index and you will find relevant articles listed under it.

2. Occasionally you will be directed from the subject heading chosen to a different heading under which the relevant or additional articles are listed.

3. If you do not find the subject heading you first choose, try a more general heading.

4. Each entry under the heading relates to an article appearing in the abstracts journal and gives the serial number of that article in the journal preceded by the last digit of the current year, eg 3—12345: ie Abstract number 12345 in the abstracts journal for 1973.

The Institution of Electrical Engineers

Physics Abstracts is published every two weeks by the Institution of Electrical Engineers in association with the American Institute of Physics. Twice-yearly subject and author indexes covering the period January–June and July–December are included in the subscription. Printed by Unwin Brothers Limited, Old Woking, Surrey, England. Second class postage paid in New York, NY 10001, USA.

baffles, suppression of transducer sidelobes 3−94
complex waveform generation using device with D/A convertor followed by low pass filter 3−28482
data buoy with hydro-acoustic data transmission channel 3−31474
for field visualization 3−32039
noise reduction ear enclosures 3−3467
nonlinear ear protectors, evaluation using constant temporary threshold shift technique 3−3466
relay transponder, for precise positioning of near-bottom equipment 3−28089
acoustic field
anisotropic, spatial cross-correlation 3−19124
asymptotic representation of point source field for coastal divergent channel 3−5736
caustics formation, interaction of sound with shells 3−28414
circular enclosure, characteristic freqs., numerical determination *(French)* 3−9768
circular piston source, pressure field of radiations created by nonlinear interaction of monochromatic carriers 3−9766
correlation functions meas. of nonstationary sound field 3−3764
high frequency fields, ray pattern description by use of virtual sources *(Russian)* 3−5737
hot jet, acoustic far field computation from turbulence parameters, crossed beam technique 3−3636
in-ear monitoring of noise exposure 3−3525
infinite circular cylindrical transducer, partially coated with compliant layer 3−28412
jets, turbulent, nearfield pressure 3−5716
migration of gas filled cavities in inhomogeneous sound field 3−4602
musical instruments, STL ionophone transducer for obs. 3−96
near and farfield radiation of annular ring, det. using impulse response and fast Fourier techniques 3−5724
plate vibrations and sound radiation, evaluation of acoustic properties 3−3665
pressure field in fluid layer between two parallel elastic plates 3−5701
pressure fields in finite container, mixed boundary value problem 3−1425
radiation patterns of multipole sources in motion 3−5722
reverberant, place dependence of timbre of complex tones 3−19118
reverberant chamber for sound power meas. in air or water 3−99
rigid duct containing dissipative silencer, attenuation characteristics 3−95
scattered field attainment, principal methods survey 3−32517
space time structure in a compressor intake duct 3−5787
stationary random sound signal, energy spectra of scattered field, in ocean 3−27994
transmission loss obs., effect of room size 3−3702
u.s., chemical reaction rates, effect of temp. and static pressure 3−27871
u.s., liquid H_2 bubble chamber, vapour bubble behaviour 3−25904
visualisation of time average pressure distribution in rectangular resonant cavity 3−9755
visualisation with photographic device *(Russian)* 3−3766
effects on vortex shedding in air flow, shear layer behind circular cylinder 3−29859
acoustic generators
